

PARCHISI STAR

Complete Rulebook & Server-Rules Reference

Gameplay rules, room types (Classic / Spanish / Rapido), the Maximo power overlay, timers, undo logic, team play, and app features — consolidated from published app documentation and the engine's internal rules reference.

CONSOLIDATED EDITION • JULY 2026

1. Overview

Parchisi STAR is a mobile and tablet adaptation of Parcheesi (also known as Parchís or Pachisi), a classic cross-and-circle race game with roots in the Indian game Pachisi. Developed by Gameberry Labs, it brings the traditional board game online with multiplayer matchmaking, chat, and social features, and is played by over 28 million people worldwide.

The objective is simple: be the first player to move all four of your tokens from your home yard, around the board, and into the center home triangle — but the exact rules of movement, safety, and scoring shift depending on which room type you're playing.

A note on sourcing. This edition combines two sources: (1) publicly available app-store descriptions and player-facing explanations of Parchisi STAR, and (2) a detailed internal rules reference describing how the rules are actually implemented in the game engine (room types, board constants, timers, etc.). Where the two differ or the internal reference is more precise, the internal reference takes precedence and is marked with a source tag.

2. Game Types at a Glance

Parchisi STAR offers three underlying room types — **Classic**, **Spanish**, and **Rapido** — plus **Maximo**, which is not a room type on its own but a power-up overlay that can be layered on top of any of the three.

Rule	Classic	Spanish	Rapido
Blockades allowed	Yes	Yes (plus cross-block, breakable)	No
Cross-block / cross-double	—	Yes	—
Force-break cross blockade	—	Yes	—
All tokens safe on safe tiles	No	No	Yes
Arrows (shortcuts)	No	No	Yes
Roll-penalty target	Furthest token	Last-moved token	Furthest token
Typical victory type	Normal / Kill / Quick	Normal / Kill / Quick	King / QuickKing (race)

Source: internal engine rules reference — room configuration constants.

3. Match Setup & Modes

3.1 Players & Setup

- 2 or 4 players (select room types support 6 players — see §4 board specs); in 2-player games, opponents typically sit across from each other.
- Each player selects a color and controls that color's four tokens, starting in their home yard.
- Players may bet a portion of their in-game gold on the match outcome; the betting pool determines the reward.

3.2 Game Modes

Mode	Description
1 ON 1	Head-to-head match against a single opponent.
TEAM UP	Play cooperatively in pairs against another team (see §13 — requires exactly 4 players).
4 PLAYER	Classic four-player free-for-all match.
PLAY OFFLINE	Practice or play without an internet connection.
MAXIMO 1 ON 1	1-on-1 match with the Maximo power overlay active (see §14).
RAPIDO 1 ON 1	Fast-paced match using the Rapido room type and King/QuickKing race victory condition (see §2, §15).

4. The Board

Property	Standard (2-4 Players)	Extended (6 Players)
Outer track length	68 cells	102 cells
Pre-winner cell	64	98
Goal lane start	69	103
Final goal position	99	199
Goal lane length (per player)	7 cells	7 cells
Tokens per player	4	4

- Each player's entry cell is calculated as $\text{index} \times 17 + 1$ — Player 0 enters at cell **1**, Player 1 at **18**, Player 2 at **35**, Player 3 at **52**.
- Each player has a private 7-cell goal lane starting at $\text{goalStartPos} + \text{index} \times 7$.

4.1 Safe Positions (Star Cells)

Standard board safe cells: `1, 8, 13, 18, 25, 30, 35, 42, 47, 52, 59, 64`. The 6-player extended board adds `69, 76, 81, 86, 93, 98`. Every player's start cell, plus the star cells between them, are safe — though what "safe" actually protects against varies by room type (see §8).

5. Dice Rolls

- Die faces run 1-6.
- A match uses either one die or two dice depending on room configuration.
- The roll generator nudges outcomes in specific situations — for example, forcing a 6 when all of a player's tokens have been stuck at home for several turns, or forcing the exact number needed when only one token remains short of goal. This is a fairness-assistance mechanic, not something a player can control.

5.1 Rolling a Six — Bonus Roll

Rolling a **6** grants another roll, and the player keeps rolling. A running counter of consecutive sixes is tracked.

Three consecutive 6s (or three doubles) — Penalty. If three sixes (or three doubles, in two-dice games) are rolled in a row, the turn is voided: accumulated rolls are discarded and the player cannot move that turn. As punishment, **one opponent token is killed and sent home**. Which token is targeted depends on the room's roll-penalty rule: Classic and Rapido punish the opponent's *furthest-advanced* token; Spanish punishes the opponent's *last-moved* token.

6. Doubles

- In two-dice games, rolling a double (both dice showing the same number) grants an extra turn, tracked by the same consecutive-roll counter used for sixes.
- Three consecutive doubles trigger the same penalty described above — turn voided, and an opponent's token is sent home.
- Forced doubles are also used by the game to break long-standing blockades — see §9.

7. Token Movement

- A move advances a token by the rolled value, one cell at a time, wrapping from cell 68 back to cell 1 on the outer track.
- A move is legal only if every cell it crosses is passable (i.e., not blocked by an enemy blockade) and the landing cell itself is legal.
- At the pre-winner cell, a token transitions into its private goal lane — but only if the active victory type permits it (for example, in Kill/Quick modes a token may need to have scored a kill first before it can enter the goal lane).

7.1 Coming Out of Home

- A token leaves home on a roll of **5** (single die), or a two-dice combination that sums to 5.
- Even with a valid exit roll, a token cannot come out if its start cell is currently blocked by an enemy blockade.
- In Normal victory mode, only **one** token may come out per qualifying roll; King and QuickKing modes may allow more than one to exit at once.

7.2 Reaching the Goal — Exact-Count Rule

Inside the goal lane, the move to reach the final goal cell must be **exact** — overshooting is illegal. If a token needs exactly 5 more spaces and the player rolls a 6, that 6 cannot be used to move that token into goal. A token reaches the final goal when it steps off the last goal-lane cell onto the goal position; its state becomes permanently safe once there.

8. Safe Cells & Capture Rules

8.1 Safe Cell Behavior by Room Type

Room Type	Safe Cell Behavior
Classic	Standard rule — enemy tokens generally cannot co-occupy your safe cell (stacking there is blocked); your own tokens may stack freely.
Spanish	Up to 2 tokens may share a safe cell; a third arrival on that cell is killed.
Rapido	Everyone is safe on safe tiles — unlimited stacking is allowed, and no kills can occur there.

- Own-color tokens can always stack on a cell — this is how blockades form.
- A token that has reached Goal is always safe.

8.2 Kill / Capture

- Landing on a cell occupied by exactly one enemy token, on a non-safe cell, kills it.
- A killed token is sent all the way back home.
- A kill earns the killer a bonus move (the "kill reward," see §9) plus kill experience points.
- You cannot kill a token sitting on a safe cell (subject to the per-room rules above), and you cannot kill a blockade.

9. Reward Moves

Event	4-Player Board	6-Player Board
Kill reward move	20	30
Goal reward move	10	15

- After scoring a kill, the player gets to move any one token by the kill-reward amount.
- After getting a token home, the player gets a bonus move of the goal-reward amount.
- If only one token can legally use the reward move, it moves automatically; otherwise the player chooses which token to move.

10. Arrows (Rapido Only)

- Arrows only exist in the Rapido room type.
- Landing exactly on an arrow's start cell teleports the token forward to the arrow's end cell.
- In Rapido, landing on an arrow also grants a bonus roll.

Example arrow maps (vary by player count / seat):

- **4-player board (all seats):** 4→7, 10→13, 21→24, 27→30, 38→41, 44→47, 55→58, 61→64
- **2-player board (Player 0's path):** 12→15, 24→27, 34→37, 46→49, 58→61, 68→3

11. Blockades

11.1 Forming a Blockade

- **Classic blockade:** two tokens belonging to the same player occupying one outer-track cell (not inside the goal lane, and only for exactly 2 tokens).
- **Spanish blockade:** also supports cross-blocks and cross-doubles between certain positions.
- Blockades cannot form inside the goal lane.

11.2 Effect

- An enemy token cannot pass through or land on a blockade — it functions as a wall.
- Because both tokens belong to the same player, a blockade cannot be killed by an opponent; it only dissolves when the owner voluntarily moves one token off it.
- **Rapido allows no blockades at all** — tokens never wall each other in this room type.

11.3 Anti-Stall: Forced Break

Blockade duration is tracked against soft and hard turn limits:

- Past the **soft** limit, the game may force a double roll to compel the player to break the blockade.
- Past the **hard** limit, a forced double is guaranteed.
- These limits tighten on 6-player boards (soft limit as low as 1 turn, hard limit 2–4 turns depending on victory type).

12. Timers

```
Extra Turn Time      = 2s
Turn Time (2P / 4P) = 20s + 2s = 22s
Turn Time (6P)      = 15s + 2s = 17s
Turn Time (6P Prem) = 12s + 2s = 14s
```

12.1 On Timeout

1. A human player who times out is converted to auto-play (bot control). They get a short 5-second grace window to resume manual play.
2. A turn taken by the bot/auto-player counts as a missed turn.
3. After **2 consecutive missed turns**, the player is removed from the game entirely.

Rapido uses the same per-turn timers as other room types — its faster feel comes from the King/QuickKing race victory condition, not a shorter clock. Matchmaking wait time for Rapido tends to run about 30% longer than other modes.

13. Auto Mode

- **Trigger:** a single per-turn timeout is enough to flip a human player into auto-play; no multi-miss threshold is required to enter auto mode.
- **Move selection:** auto/bot logic selects the move. When only one token is legally movable, it moves automatically even for human players who haven't timed out.
- **Exit:** there's no manual "resume" toggle out of auto mode. It continues until the player leaves, is removed for 2 missed turns, or the game ends — though a player nudged into auto by a single timeout does get the 5-second grace window to act before full bot takeover.

14. Undo & Undo Timer

14.1 What Can Be Undone

Undo applies only to the pre-roll state, before a dice result is committed. Once a roll is fully applied, it cannot be undone — you must wait for your next turn.

14.2 Gating Conditions (all must hold)

1. The caller must be a human player (not currently playing as a bot).
2. It must be that player's turn, and they must be able to roll.
3. A pre-roll state must exist.
4. The per-turn undo cap must not be exceeded — 2 undos for the standard cohort, 3 for the "triple-undo" cohort.
5. **Cost:** each undo costs potions, scaling with undo depth. Free undos require an active Premium Pass (valid for 1 hour).

14.3 Undo Window

```
Standard undo window      = 3 seconds
First-time-user (FTUE) window = 5 seconds
```

The undo window is the brief period after the dice result is shown (visualized as a fill bar); it closes as soon as the move commits.

Maximo interaction: using undo actions also fills the Maximo power-up bar (see §16).

15. Team-Up Mode (Tag / 2v2)

- Requires exactly 4 players. Two team sub-modes exist: standard Tag and Random Tag (randomly assigned partners).
- **Partner pairing:** partner index is calculated as $(\text{seat_index} + 2) \bmod 4$ — so seats 0 & 2 are one team, and seats 1 & 3 are the other.
- **Friendly fire:** killing your own partner's token earns you no event reward — the reward is instead credited to your partner. Killing an opponent's token rewards normally.
- **Shared turn info:** partners share relevant played-roll and position information so the team can play as a coordinated unit.

15.1 Team Winning Conditions

- **Non-Rapido Tag:** the moment the first teammate finishes, the team's game ends. Both partners are ranked together with consecutive top ranks.
- **Rapido Tag:** stricter — both partners' King tokens must reach the goal before the team win is triggered; the game continues until then.
- Team mode is not supported in VIP rooms.

16. Maximo (Power Mode)

Maximo is a power overlay that sits on top of a normal room type (Classic, Spanish, or Rapido) rather than being a room type of its own. All base rules for the underlying room type still apply; Maximo adds a power-up bar that fills as you play, plus three power-ups. Maximo requires a recent client version to be enabled.

16.1 Power-Up Bar

```
Power-up bar size by bet tier:
500 / 2,000 gold bet    -> 42 (bar fills slowest)
10,000 / 50,000 bet     -> 36
250,000 / 1,000,000 bet -> 28
3,000,000+ bet          -> 18 (bar fills fastest)

Power-up duration = 2 turns (every power-up lasts 2 turns)
Undo actions also contribute to filling the bar
```

Lower-stake rooms need a bigger bar to fill, meaning power-ups arrive more slowly; high-roller rooms fill the bar faster.

16.2 Free Daily Claims

```
Mines: 15 | Shields: 15 | Free-rolls: 1
Resets daily at 00:00 UTC
```

16.3 The Three Power-Ups

Power-Up	Effect
Mines	Drop mines on the board; an enemy token landing on a mine is killed unless shielded. Placing new mines clears the player's previous ones. Lasts 2 turns. Mine-kills are tracked as a separate statistic.
Shields	Protects one token for 2 turns; a shielded token that hits a mine loses the shield instead of dying. Auto-targeting prioritizes the token nearest to enemies or mines, and is never applied to tokens already in the home lane or goal.
Free-Roll	Grants a bonus roll, usable even when the player has no currently movable token (as long as rolling is otherwise allowed).

16.4 Bots in Maximo

- Bots use a power-up roughly once every 5 turns.
- Rigged-bot Maximo games (bots weighted to be beatable) are limited to a new player's first 3 games only.

17. Game End, Win, Lose & Exit

17.1 Victory Types

Type	Win Condition
Normal	First to bring all 4 tokens to goal (3 tokens on a 6-player board).
Kill	First to kill one opponent token.
Quick	First to get one token home.
King	Get the designated King token home (plus others, depending on mode).
QuickKing	Get the King token home in a quick race format.
Blitz	All tokens home, plus the most Blitz points; a running Blitz game timer can also end the match, with the higher-point player winning.

17.2 End / Lose States

- **Completed:** the player has won or finished and been ranked.
- **Defeated:** the player has lost (in King/QuickKing modes, this happens when your King token is killed — all of that player's tokens are then sent home).
- **Left:** the player exited mid-game (see below).

17.3 Exiting Mid-Game

1. The leaving player's turn is ended immediately.
2. Their state is set to Left.
3. All of their tokens are returned home.
4. Play passes to the next player, and the game continues without them.

17.4 Ranking & Rapido End Types

Players are ranked in finish order. In non-Rapido Tag mode, both partners receive consecutive ranks the moment the first one finishes (see §15).

Rapido matches can end in one of three ways: not applicable (not Rapido), ended by a King-token kill, or ended by the King token reaching the goal.

18. App Features (Player-Facing)

18.1 Social & Communication

- Real-time in-game chat and emoji reactions during matches.
- Voice chat support, plus the ability to mute disruptive opponents.
- Facebook login enables friend invites and cross-device play.
- "Play with Friends" option for organizing private rooms.

18.2 Rewards & Progression

- Daily Magic Chest offering up to 50,000 coins.
- 500+ customizable boards and dice designs to unlock.
- Achievements that unlock as you play.
- Weekly leaderboard / league system for climbing the ranks.
- "Parchisi Hour" events — winning by wider margins during these windows earns larger rewards.

18.3 Customization

- Personalize your avatar, game tokens, dice appearance, and game boards.
- Tokens are crafted using materials collected through gameplay.
- In-game currency can also be purchased with real money.

18.4 Cost & Accessibility

- Completely free to play, with all core features available with no initial purchase.
- Designed for both tablets and phones, on Android and iOS.

19. Quick-Reference Constants

Item	Value
Die faces	1-6
Consecutive-six / double penalty threshold	3
Exit-home roll	5 (single die) / sum of 5 (two dice)
Outer track length	68 cells (102 extended)
Final goal position	99 (199 extended)
Safe cells	1, 8, 13, 18, 25, 30, 35, 42, 47, 52, 59, 64 (+6 more on extended board)
Kill reward move	20 (30 on 6-player board)
Goal reward move	10 (15 on 6-player board)
Turn time	22s (2P/4P) / 17s (6P) / 14s (6P premium)
Missed-turn limit before removal	2
Undo cap per turn	2 (standard) / 3 (premium cohort)
Undo window	3s (5s for first-time users)
Maximo power-up duration	2 turns
Maximo daily free claims	15 mines / 15 shields / 1 free-roll
Team partner formula	$(\text{seat index} + 2) \bmod 4$

20. Known Quirks & Player-Reported Notes

- Some versions have been reported to force a blockade to break upon rolling doubles, which departs from the classic rule where blockades hold until no legal move remains — this generally aligns with the forced-double anti-stall mechanic described in §11.3.
- Coins and gems for re-rolls or premium customization accumulate slowly through daily logins if you prefer not to spend real money.
- Rule details can vary meaningfully depending on the selected room type (Classic / Spanish / Rapido) and whether Maximo is active — the differences aren't cosmetic, they change blockade behavior, safe-cell stacking, and victory conditions.

On the requested backend lookup: An attempt was made to retrieve server-side rule data from the internal devtool URL provided (devtool1.ls-int.superkinglabs.com). The page returned only an empty client-rendered shell with no visible project data — it appears to require authenticated, in-network access that isn't available here. If you can export or paste the relevant project content directly, it can be folded into a future revision of this document.

This edition consolidates the uploaded internal rules reference (GAME_RULES.md) with publicly available Parchisi STAR app documentation. Section numbering follows the

internal reference; player-facing feature descriptions (\$18) are sourced separately from app store listings and may not reflect every current in-app detail.
